

How to use LTwo® OUTDOOR

Thanks to its round shape, LTwo® OUTDOOR is particularly easy to install anywhere and on any surface. You decide where and for what purpose you want to use the product. In addition, the product can be rotated 360 degrees and thus allows for very easy alignment of the selected light distribution.

The light is ready for connection via a low-voltage M8 industrial plug.

You do not necessarily need manufacturer-specific accessories to install the product.

LTwo® OUTDOOR can be mounted using standard electrical installation accessories, such as the OBO quick clamp or any type of pipe clamp. Alternatively, you can use the installation clamp from apl, which allows the product to be secured with a cable tie.

Mounting clips and connection cable with plug for simple plug and play installation
